# Today's Lesson

Dear Learners,  
Let me give you some cues  
to find out our today's topic.

# **Today's Lesson**

10.1: Points, Lines and Planes

10.2: Angle, types of angles

## Objectives

By the end of the lesson, students will be able to:

1. say and write the definition of points, lines, planes and angles.
2. identify and draw the different types of angles by using protector.
3. write the name of different angle by looking figures .
4. draw the angles measure in degree by the protractor .

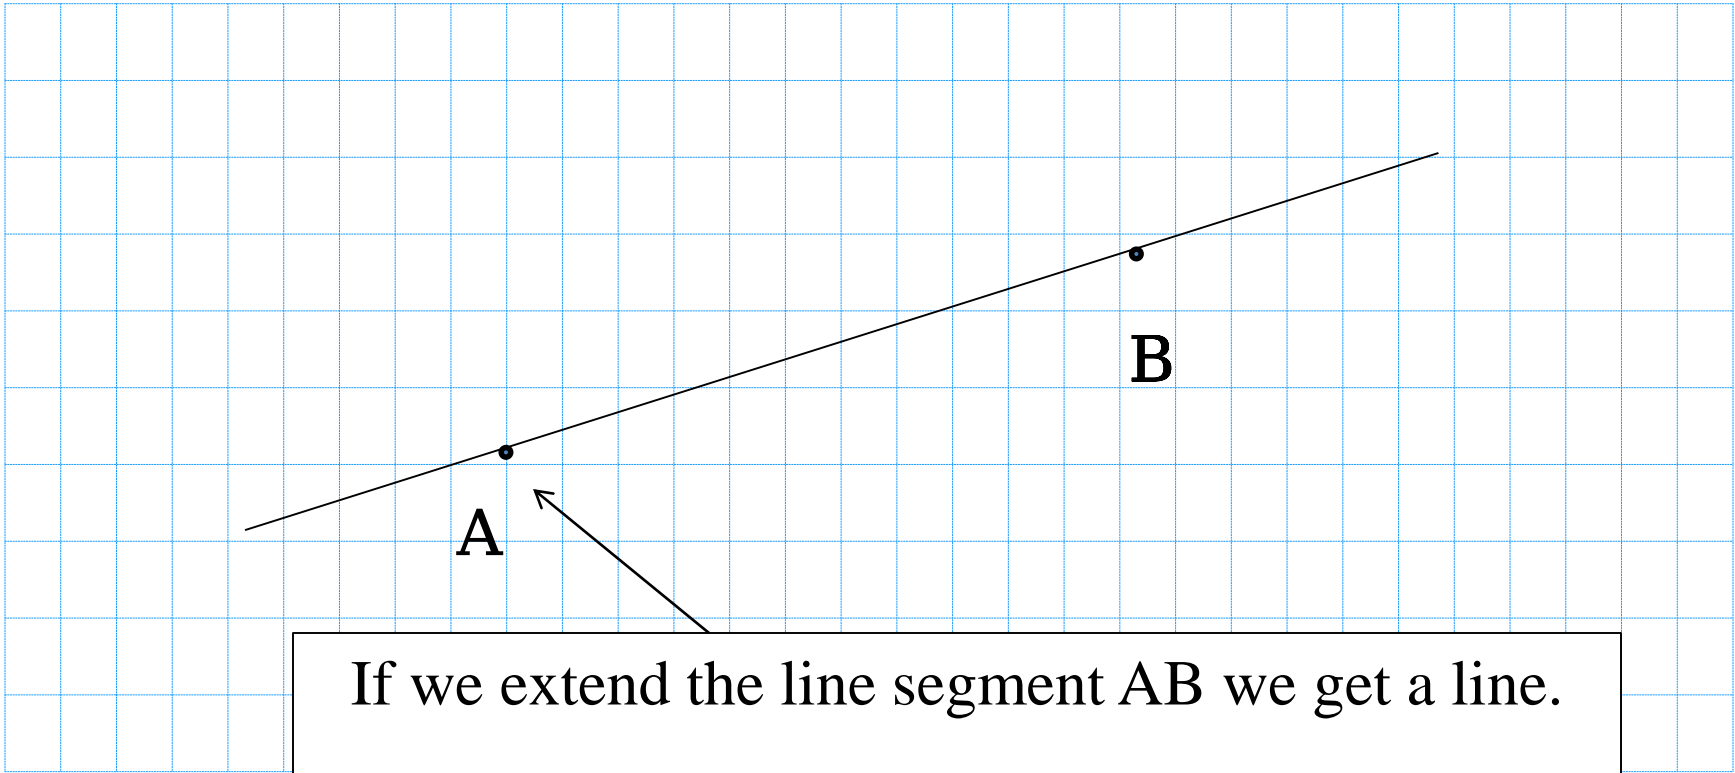

Point A

A Point has a position but it has neither size nor shape .

AB is Line segment

If we extend the line segment AB we get a line.

If a line has one end point is called  
Ray

Ray has no definite length

  
Ray: Ray has no definite length; it has only one end point.

The upper of a football is a surface. This surface is not a plane surface, it is a curved surface.

# Matching

Line

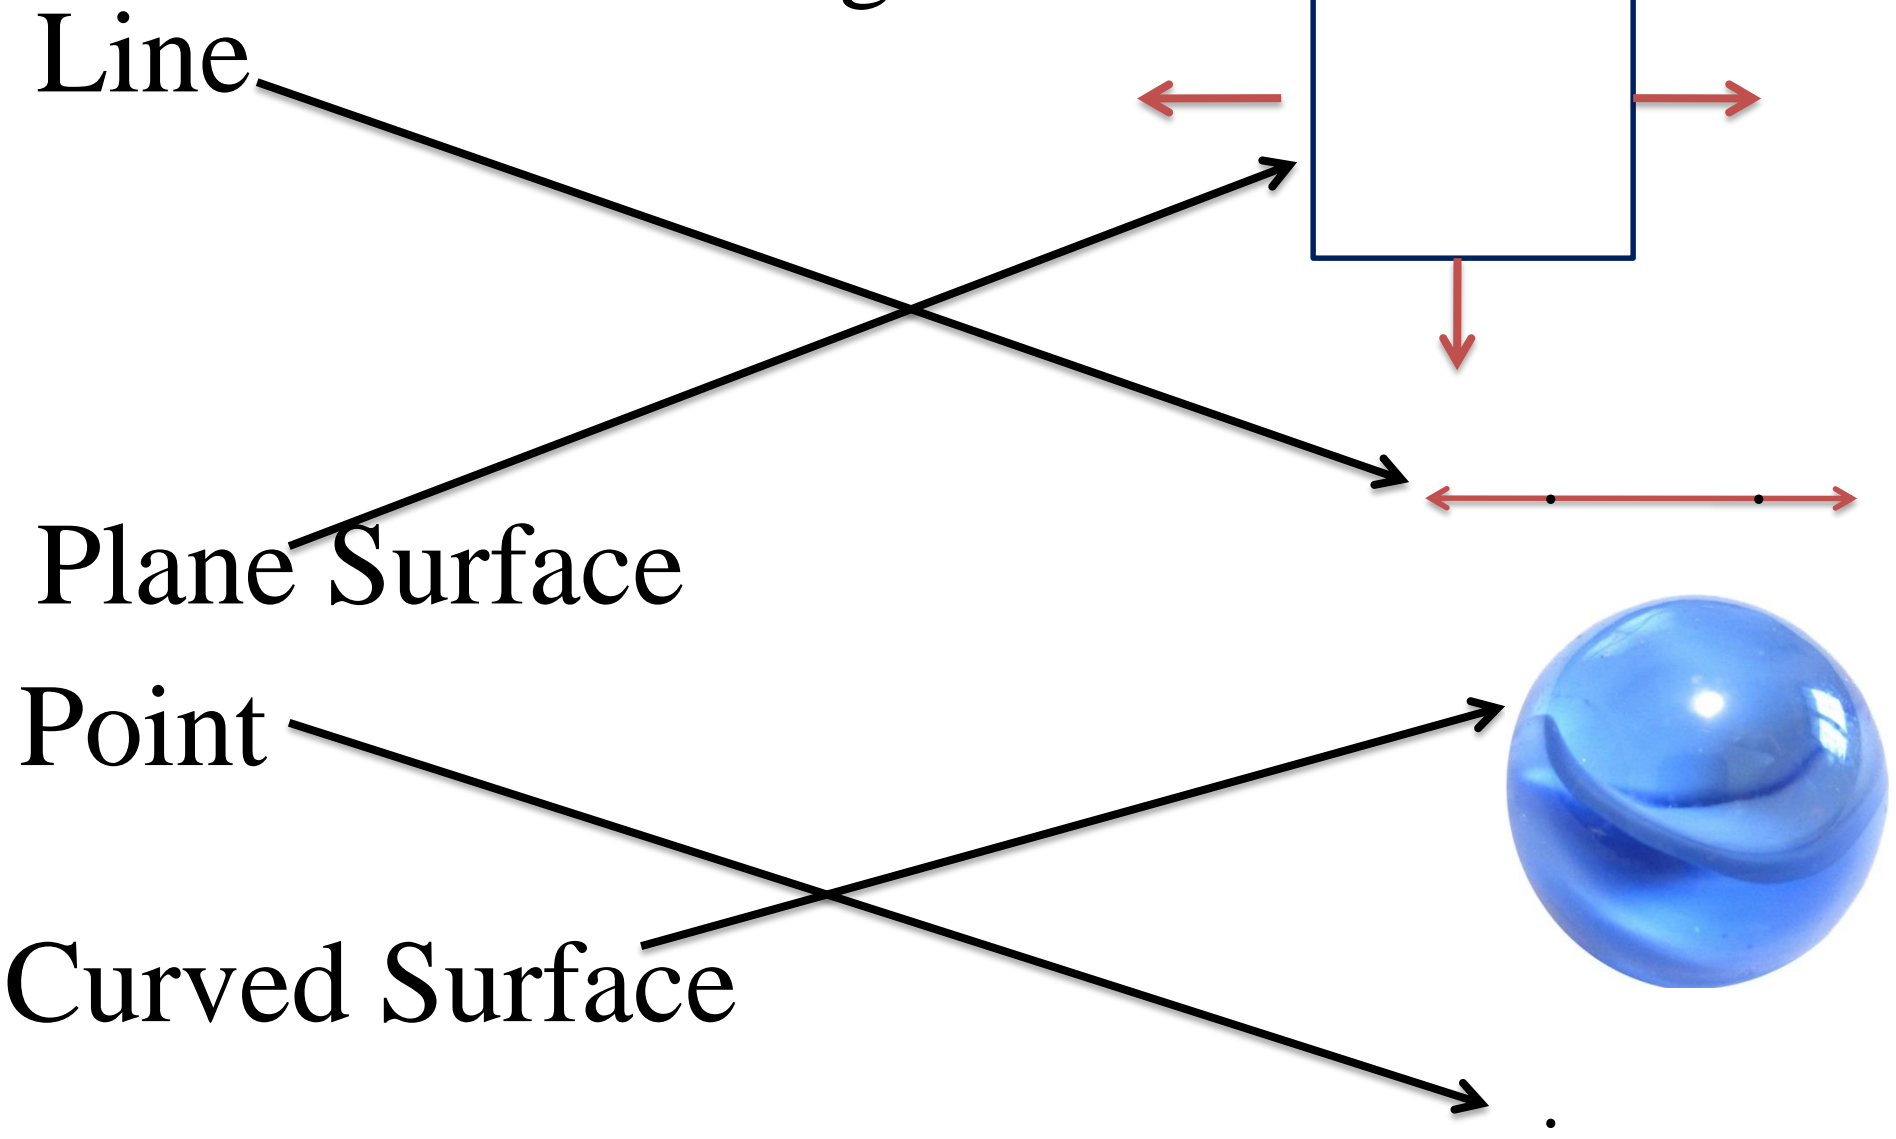

Plane Surface

Point

Curved Surface

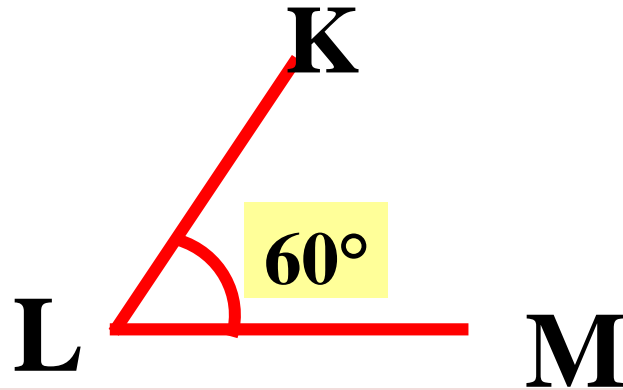

$$ALM = 60^\circ$$

**An angle whose measure is greater than  $0^\circ$  but less than  $90^\circ$  is called acute angle.**

# Which one is acute angle ?

Here,  $\angle KLM$  is an acute angle

Here,  $\angle KLM = 90^\circ$

A right angle is a angle whose measure is exactly  $90^\circ$ .

Here,  $\angle KLM$  is a obtuse angle

An angle whose measure is greater than  $90^\circ$  is called obtuse angle .

# Which one is obtuse angle ?

Here,  $\angle KLM$  is a straight angle

An angle whose measure is exactly  $180^\circ$  is called straight angle .

# Which one is straight angle ?

Here,  $\angle KLM$  is a right angle.

# Feedback

1. What is straight angle?

1

2

3

4

Write the name of these angle.

# HW

## Exercise 10: No. 1 & 2

Measure the following angles in degree by the protractor and write them below the respective angles :

Thank You
